# What if the MBTA covered all of New England?

Built out from today's T: 380 miles of real proposals, 557 miles imagined.
North Station and South Station finally connect at Boston Central.

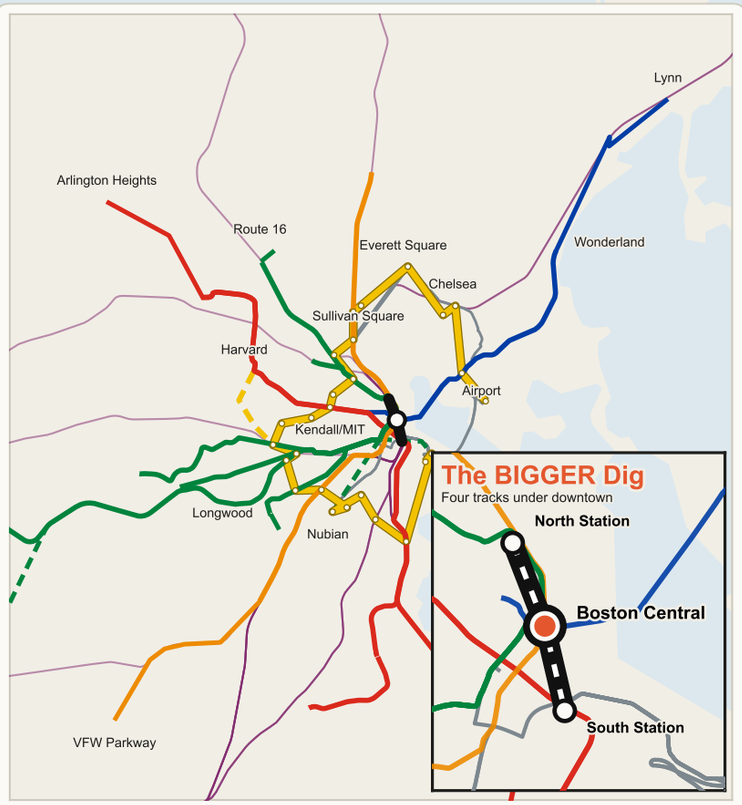

## City lines: light rail and streetcars (diagrams, not to scale)

- Commuter rail today
- Other trains running today, joined to the T
- New line: real proposal or strong case
- Imagined: needs big money or new track

Dotted lines leave for cities just off the map. Lines follow real rail corridors.

## Boston: the T, extended

New Yellow Line · Extensions solid · dashed = imagined
